## INSTRUCTIONS

### EYEBROWS

**NOTE:** Please clean the area beforehand with tonic / facial water – the skin must be dry and free from any oils and creams. Apply conventional powder to the area as additional skin protection before performing the procedure. If hairless spots between the strips and the brow appear when you place the strips in position, it shows that you should let the eyebrow hair grow there. A few small leftover hairs can be pulled out easily with tweezers.

**STEP 1:** Separate the strips slowly and evenly so that you now get one strip for the right eye and one strip for the left eye. Begin with a strip for an eyebrow and in the meantime glue the strip which you use for the second eyebrow, carefully and easily detachable to a table edge or on your small fingernail. Now you have both hands free to position the first strip correctly and easily.

**STEP 2:** Remove product residue with a calming care wipe. Be careful not to come into contact with the eye.

**STEP 2:** The strips have punched marking points as positioning aid. Position the strip below the brow in such a way that the side showing a point is applied at the beginning of the brow, i.e. at the inner edge of the eye, and the side showing two points at the end of the brow, i.e. at the outer edge of the eye. The strip should be positioned horizontally to the ground. Press the strips tightly and evenly to allow the wax to bond well with the hair to be removed under the eyebrow. Make sure that your eyebrows or eyelashes do not stick to the wax strip.

**TIPP:** If you want to color your eyebrows with eyebrow color, the now applied strips are best suited as a dyeing template. Bring the eyebrow tint to your eyebrows and remove the eyebrow tint after the exposure time. Then proceed to step 3.

**STEP 3:** Tighten the skin at the outer edge of the eyebrow. Peel the strips quickly in the opposite direction of hair growth towards the nose direction - from the outer eye to the inner eye. Please note that you should peel the strips at a flat angle / close to the skin.

**STEP 4:** Remove product residue with a calming care wipe. Be careful not to come into contact with the eye.

### UPPER LIP

**NOTE:** Please clean the area beforehand with tonic / facial water – the skin must be dry and free from any oils and creams. Apply conventional powder to the area as additional skin protection before performing the procedure. A few small leftover hairs can be pulled out easily with tweezers.

**STEP 1:** Separate the strips slowly and evenly so that you now get one strip for the right side and one strip for the left side. Begin with one strip for one side and then glue the strip, which you use for the other side later, carefully and easily detachable to a table edge or on your small fingernail. Now you have both hands free to position the first strip correctly and easily.

**STEP 2:** Position the strips above those parts of the auditory canal that you want to remove hairs. Press the strips tightly and evenly to allow the wax to bond well with the hair to be removed. Make sure that the wax strip is attached only to the outer ear and not to the auditory canal.

**STEP 3:** Tighten the skin and pull the strips quickly against the hair growth direction of the respective hair to be removed. Please note that you should peel the strips at a flat angle / close to the skin.

**STEP 4:** Remove product residue with a calming care wipe. Be careful not to come into contact with the auditory canal of the ear.

### EYEBROWS

**NOTE:** Please clean the area beforehand with tonic / facial water – the skin must be dry and free from any oils and creams. Apply conventional powder to the area as additional skin protection before performing the procedure. A few small leftover hairs can be pulled out easily with tweezers.

**STEP 1:** Separate the strips slowly and evenly so that you now get one strip for the right eye and one strip for the left eye. Begin with a strip for an eyebrow and in the meantime glue the strip which you use for the second eyebrow, carefully and easily detachable to a table edge or on your small fingernail. Now you have both hands free to position the first strip correctly and easily.

**STEP 2:** Remove product residue with a calming care wipe. Be careful not to come into contact with the eye.

**STEP 2:** Position the strips around the eyebrow where you want to remove hairs. Press the strips tightly and evenly to allow the wax to bond well with the hair to be removed. Make sure that your eyebrows or eyelashes do not stick to the wax strip.

**STEP 3:** Stretch the skin and pull the strips quickly against the hair growth direction of the hair. Please note that you should peel the strips at a flat angle / close to the skin.

**STEP 4:** Remove product residue with a calming care wipe. Be careful not to come into contact with the eye.

### UNIVERSAL STRIPS

If necessary, use the enclosed triangular universal strips for hair between the eyebrows or to define around the eyebrow.

**NOTE:** Please clean the area beforehand with tonic / facial water – the skin must be dry and free from any oils and creams. Apply conventional powder to the area as additional skin protection before performing the procedure. A few small leftover hairs can be pulled out easily with tweezers.

**STEP 1:** Separate the strips slowly and evenly so that you now get one strip for the right foot and one strip for the left foot. Begin with one strip for a hair between the eyebrows or to define around the eyebrow and in the meantime glue the strip which you use for the second hair between the eyebrows, carefully and easily detachable to a table edge or on your small fingernail. Now you have both hands free to position the first strip correctly and easily.

**STEP 2:** Position the strips at those points where you want to remove hairs. Press the strips tightly and evenly to allow the wax to bond well with the hair to be removed.

**STEP 3:** Tighten the skin and pull the strips quickly against the hair growth direction of the respective hair to be removed. Please note that you should peel the strips at a flat angle / close to the skin.

**STEP 4:** Remove product residue with a calming care wipe.

**STEP 2:** Position the strips around the eyebrows where you want to remove hairs. Press the strips tightly and evenly to allow the wax to bond well with the hair to be removed. Make sure that your eyebrows or eyelashes do not stick to the wax strip.

**STEP 3:** Remove product residue with a calming care wipe. Be careful not to come into contact with the eye.

**STEP 2:** Position the strips around the eyebrows where you want to remove hairs. Press the strips tightly and evenly to allow the wax to bond well with the hair to be removed. Make sure that your eyebrows or eyelashes do not stick to the wax strip.

**STEP 3:** Remove product residue with a calming care wipe. Be careful not to come into contact with the eye.
